TECHNICAL SKILLS

Languages: Java, Python, C, C#, SQL, JavaScript, TypeScript, HTML/CSS, Swift, YAML

Frameworks & Tools: Spring Boot, React, Node.js, Express.js, ASP.NET, Razor, Entity Framework, WPF, React Native, MongoDB, Kafka, Bootstrap, Knockout.js, SignalR, Dapper

DevOps & Cloud: Git, Docker, Kubernetes, Jenkins, SonarQube

Testing & Build: JUnit, Mockito, Playwright, Gradle, Maven, RESTful Services, Arrange-Act-Assert

Mobile: React Native, Swift (iOS), Android Studio (Java)

EDUCATION

Computer Applications Development (Co-op)

Conestoga College, Waterloo, ON | President's Honours List, High Distinction

Sept. 2025

Bachelor of Science: Honours Computer Science

Wilfrid Laurier University, Waterloo, ON

Nov. 2021

PROFESSIONAL EXPERIENCE

Software Developer Co-op, Telematics | Tigercat Industries Inc., Cambridge, ON

Sept. - Dec. 2025

- Developed and maintained **RemoteLog**, a telematics web platform for monitoring heavy forestry equipment, using **C#, ASP.NET, JavaScript, jQuery, Knockout.js, SignalR**, and **Bootstrap**; contributed across performance improvements, feature delivery, and product enhancements
- Resolved critical timeouts on the **Machine Analytics page** — queries relied on **in-memory filtering** regularly exceeding MySQL's 30-second limit; refactored into a **targeted stored procedure** called via **Entity Framework** with database-level filtering, reducing load time to seconds
- Designed and delivered the **Machine Images feature** for RemoteLog's map, replacing generic dot markers with actual machine images; used **SignalR** to push live image updates to the map in real time; scoped from an open-ended request with no formal requirements, driven by independent design decisions and iterative team presentations
- Built a customer-facing **Service Bulletins page** for viewing machine-specific bulletins with print-friendly formatting; standardized **navigation structure** across all pages and resolved inconsistent mobile navigation
- Designed and deployed the **Fluid Tests Analytics page**, providing operational insights into machine fluid test data

Software Developer, Institutional Securities Technology | Morgan Stanley, Montreal, QC

Oct. 2021 - Jul. 2023

- Contributed to the redesign of **Research Articles** from a **monolithic architecture** to modern **Java Spring Boot** microservices, building RESTful APIs, error handling, and integrations with on-site systems; made supporting adjustments to the existing **Research Portal** as article systems were modified
- Designed and built the **Article Platform microservice** end-to-end: models, service layer, and REST controllers consuming a CRM API via **RestTemplate**; exposed REST endpoints consumed by the frontend team; delivered a **preview environment** allowing analysts to review articles before publishing, with separate API integrations and data handling
- Diagnosed a production issue** where certain article types failed to load from the **EidosMedia Cobalt CMS**; isolated the cause using browser dev tools, Postman, and in-code timing; coordinated with their team to raise a fix
- Regularly handled biweekly **production deployments**, performing **regression testing** to ensure release stability; participated in the migration of on-prem infrastructure to **Azure Kubernetes**; wrote **JUnit and Mockito** tests; presented to **stakeholders**; participated in Agile ceremonies including sprint planning and retrospectives; built a **Kafka** message producer and consumer as a self-directed learning initiative

PROJECTS

FairFund: Collaborative Budgeting App | MongoDB, Express, React, Node.js

github.com/danhuynh1/frontend-fairfund

- A full-stack MERN web app for managing shared group expenses — users create groups, log expenses, split costs, track who owes whom, and settle debts. **Runner-Up, Top Capstone at Conestoga College (2025)**
- Google OAuth 2.0** with JWT session auth; expense splitting by equal, percentage, or custom amount; **category budgets** with spending tracking; **settlement tracking**; Swagger API docs; deployed on **Vercel** and **Render**
- Led sprint planning, backlog grooming, and retrospectives; coordinated task distribution, unblocked teammates, and tracked progress across sprints

PlaceMarker: Restaurant Finder & Ratings | React Native, Firebase, TypeScript

github.com/danhuynh1/PlaceMarker

- A React Native mobile app for discovering, saving, and annotating nearby restaurants — users search by radius, browse details, bookmark favourites, and leave personal notes
- Google Maps API** with custom markers and radius circle; **Google Places Autocomplete** and nearby search; **Firebase Realtime Database** for per-user notes; **SQLite** for local persistence; **Zustand** for global state; nested **React Navigation** (Drawer + Bottom Tabs)

Java Spring Boot Car Dealership App | Java, Spring Boot, MySQL, Thymeleaf

github.com/junha1532/CarDealership

- A full-stack dealership management web app with role-based access (Admin, Sales, Disabled), built across a layered **controller, service, and DAO** architecture using **Spring Boot** and **MySQL**
- Spring Security** role-based access; Admin panel for vehicle inventory, user management, makes/models, and specials; **Sales role** for logging purchases and tracking payment types
- AJAX-powered inventory search** across New and Used vehicles with dynamic filters (make/model/year LIKE, price range, body style); cascading make → model dropdowns; image uploads for vehicle listings; aggregate sales and inventory reports grouped by salesperson, date range, and stock value

NotifyMed: iOS Medication Reminder | Swift

github.com/Julchu/NotifyMed

- An iOS app for medication adherence — users set recurring reminders that cannot be dismissed until they record an **audio acknowledgment** confirming the medication was taken; tracks dismissed and missed reminders on a **visual calendar** with per-reminder audio storage. **3rd Place, WLU 2020 iPhone App Competition**

Discord LoL Rank Bot | Python, Discord.py

github.com/danhuynh1/DiscordLoLRankBot

- Slash command bot** that chains three **Riot Games API** calls (Account → Summoner → League Entries) to resolve a Riot ID to live ranked stats; returns tier, division, LP, wins, losses, and win rate; handles invalid Riot IDs and unranked players gracefully

CERTIFICATIONS

Full Stack Java Web Development Boot Camp | The Software Guild

Sept. 2021

Certifies knowledge of OOP techniques in Java with attention to practical application in corporate environments; prepares graduates for a career as a junior-level Java developer.

Microsoft Azure Fundamentals (AZ-900) | Microsoft Learn

2024
