PROFILE

Technology professional with 2+ years of experience in software development, testing, technical troubleshooting, and production support across enterprise environments. Proven ability to diagnose and resolve technical issues, communicate clearly with stakeholders, and deliver solutions across Java, C#, JS Web Development stacks.

HIGHLIGHT OF QUALIFICATIONS

- Computer Science graduate from Wilfrid Laurier University and Computer Applications Development diploma from Conestoga College, High Distinction; 2+ years of professional experience across Java/Spring Boot (Morgan Stanley) and C#/.NET (TigerCat Industries)
- Skilled in RESTful API design, microservices architecture, relational databases, CI/CD pipelines, and agile practices across enterprise environments
- Proven problem-solver who diagnosed and resolved production CMS defects and critical database timeouts independently; self-initiated POCs and self development
- Collaborative and detail-oriented; authored JUnit/Mockito tests, regression checks, and deployment documentation while communicating clearly with developers, QA, and stakeholders
- Adaptable fast learner with full-stack portfolio spanning MERN, React Native, Spring Boot, and iOS, and Different tech Stacks, and different industries

TECHNICAL SKILLS

Languages	Java, Python, C, C#, SQL, JavaScript, TypeScript, HTML/CSS
Frameworks	Spring Boot, React, Node.js, Express.js, ASP.NET, Razor, Entity Framework, WPF, React Native, MongoDB, Kafka, Bootstrap, Knockout.js, SignalR, Dapper, Postman
DevOps & Cloud	Git, Docker, Kubernetes, Jenkins, Azure, JIRA, SonarQube, Gradle, Maven
Testing & QA	JUnit, Mockito, Playwright Automation, Regression Testing, Defect Tracking, Arrange-Act-Assert
Mobile	React Native, Swift (iOS), Android

EDUCATION

Graduate Certificate: Computer Applications Development (Co-op) — High Distinction 2025
Conestoga College, Waterloo, ON

Bachelor of Science: Honours Computer Science 2022
Wilfrid Laurier University, Waterloo, ON

PROFESSIONAL EXPERIENCE

Morgan Stanley — Software Developer, Institutional Securities Technology Montreal, QC | 2022 – 2024

- Contributed to the redesign of Research Articles from a monolithic architecture to modern Java Spring Boot microservices, building RESTful APIs, error handling, and integrations with on-site systems
- Designed and built the Article Platform microservice end-to-end: models, service layer, REST controllers consuming a CRM API via RestTemplate; exposed endpoints consumed by the frontend team; delivered a preview environment for analysts
- Investigated and resolved a production defect where article types failed to load from EidosMedia Cobalt CMS; diagnosed using browser dev tools, Postman, and in-code timing; coordinated with vendor to verify the fix
- Owned biweekly production deployments; maintained CI/CD Jenkins pipeline; performed regression testing; participated in Azure Kubernetes migration; wrote JUnit and Mockito tests; built a Kafka producer/consumer as a self-directed initiative

TigerCat Industries Inc. — Software Developer Co-op, Telematics Cambridge, ON | 2025

- Developed and maintained RemoteLog, a telematics web platform for monitoring heavy forestry equipment, using C#, ASP.NET, JavaScript, Knockout.js, SignalR, and Bootstrap
- Conducted root cause analysis on critical Machine Analytics page timeouts; refactored in-memory filtering into a targeted stored procedure via Entity Framework, reducing load time from consistent timeouts to seconds
- Scoped and delivered the Machine Images feature end-to-end from an open-ended request with no formal requirements; used SignalR for real-time map updates; drove design independently through iterative team presentations
- Built Service Bulletins page with print-friendly formatting; resolved inconsistent mobile behaviour; built Fluid Tests Analytics page; self-initiated a heatmap POC using breadcrumb data to visualize equipment movement on the map

PROJECTS

FairFund: Collaborative Budgeting App <https://fairfund-theta.vercel.app/> *MongoDB, Express, React, Node.js*

- Full-stack MERN web app for managing shared group expenses:

Users create groups, log expenses, split costs, track balances, and settle debts. Runner-Up, Top Capstone at Conestoga College (2025)

- Google OAuth 2.0 with JWT session auth; expense splitting by equal, percentage, or custom amount; budget categorization; settlement tracking; Swagger API docs; deployed to Vercel
- Led sprint planning, backlog grooming, and retrospectives; created Test Plans, Unit Tests, and full design/implementation/deployment documentation

PlaceMarker: Restaurant Finder & Ratings

React Native, Firebase, TypeScript

- Cross-platform mobile app for discovering, saving, and annotating nearby restaurants: Search by radius, browse details, bookmark favourites, and leave personal notes
- Google Maps API with custom markers and radius circle; Google Places Autocomplete; Firebase Realtime Database; SQLite local persistence; Zustand global state; nested React Navigation

Java Spring Boot Car Dealership App

Java, Spring Boot, MySQL, Thymeleaf

- Full-stack dealership management web app with role-based access (Admin, Sales, Disabled) across layered controller/service/DAO architecture using Spring Boot and MySQL
- AJAX-powered inventory search with dynamic filters; cascading dropdowns; image uploads; aggregate sales and inventory reports grouped by salesperson, date range, and stock value

NotifyMed: iOS Medication Reminder

Swift

- iOS app for medication adherence — recurring reminders cannot be dismissed until user records audio confirmation; tracks dismissed/missed reminders on a visual calendar. 3rd Place, WLU 2020 iPhone App Competition

Discord LoL Rank Bot

Python, Discord.py

- Slash command bot chaining three Riot Games API calls (Account → Summoner → League Entries) to resolve a Riot ID to live ranked stats — tier, division, LP, wins, losses, and win rate

PROFESSIONAL DEVELOPMENT & CERTIFICATIONS

Full Stack Java Web Development Boot Camp

The Software Guild | 2022

Microsoft Azure Fundamentals (AZ-900)

Microsoft | 2024
